PROFILE SUMMARY

Software Developer with 3+ years building web applications end-to-end — React.js and Next.js on the frontend, Node.js and Express.js on the backend, with MongoDB for data. I've owned UI architecture and state management on complex editor tools and dashboards, shipped a Chrome extension end-to-end, and currently work full-stack on a logistics platform handling shipment creation, courier assignment, and real-time milestone tracking across web and mobile. Comfortable leading either side of the stack, with a track record of shipping 20+ features that measurably cut manual work for the teams using them.

SKILLS

- **Frontend:** JavaScript, React.js, Redux, Next.js, Tailwind CSS, Ant Design, Shadcn UI, Material UI.
- **State Management & Data:** Redux, TanStack Query (React Query)
- **Backend:** Node.js, Express.js, RESTful APIs
- **Authentication & Security:** Auth0, Role-Based Access Control (RBAC)
- **Database & Storage:** MongoDB
- **Development Tools:** Git, Webpack, Vite, VS Code
- **Other:** Performance Optimization, Code Refactoring, API Integration, Third-party integrations (Adobe Target, AEM, Contentful), Logistics & Shipment Management Systems

PROFESSIONAL EXPERIENCE

Full Stack Developer — Sciens Logistics

Sep 2026 - Present

- Working as a Full Stack Developer for a global freight-forwarding and logistics company, building and maintaining the core shipment management platform used by internal operations teams.
- Developed shipment creation and lifecycle workflows, including configuration of stages, legs, and layovers for complex, time-critical multi-leg shipments.
- Built OBC (Onboard Courier) assignment functionality, allowing operations teams to assign and track couriers against specific shipments in real time.
- Designed and developed the Halo App, an OBC-facing application enabling onboard couriers to log in and update shipment milestones for their assigned shipments on the go.
- Implemented automated email notification workflows tied to shipment status and milestone changes to keep internal teams and stakeholders informed.
- Used TanStack Query to manage data fetching, caching, and synchronization for shipment and milestone data, keeping the UI consistent with real-time backend updates.
- Working across the full stack (frontend, backend, and database) to deliver reliable, real-time visibility into shipment progress across the freight lifecycle.

Software Engineer — Inara Consultancy Services

Sep 2023 - Aug 2026

- Led development for the Stride experience management platform, working across the frontend and API integration layers to enable teams to author, preview and validate personalized web experiences and offers.
- Built reusable, modular UI components and implemented Redux for predictable state management across the editor and dashboard, integrating with backend REST APIs for data persistence and retrieval.
- Designed and implemented a Chrome extension for real-time preview and editing on live and staging sites; owned development, deployment, and maintenance.
- Integrated with third-party systems including Adobe Target, AEM, Contentful, and GitHub to enable content sync and deployment workflows across the stack.
- Optimized data fetching and caching and API request handling, reducing redundant API requests by 25% and improving editor load times by 50%.
- Increased overall workflow efficiency and reduced time-to-market for UI updates by 40% through component reuse and editor improvements.
- Delivered high client satisfaction through rapid iteration and responsive support.

- Implemented Auth0-based authentication, managing multiple organizations and user roles efficiently.

PROJECTS

Shipment & OBC Management Platform (Sciens Logistics)

- Built end-to-end shipment creation workflows supporting multi-leg journeys with configurable stages, legs, and layovers.
- Developed OBC assignment logic to match onboard couriers to shipments and track assignment status.
- Built the Halo App, a dedicated interface for OBCs to log in and update shipment milestones in real time, improving shipment visibility for operations teams.
- Implemented email-based notification workflows for shipment and milestone status updates.

Stride Experience Management Platform

- Developed a scalable template and experience management system for creating targeted web interactions and managing offers.
- Optimized management of large datasets using AG Grid, improving data visualization efficiency by 40%.
- Implemented role-based access and multi-organization support using Auth0 and RBAC.
- Reduced redundant API calls by 25% via optimized data fetching and caching strategies.
- Improved user efficiency by 35% by implementing a more intuitive UI/UX experience.

Stride Chrome Extension

- Designed and implemented a Chrome extension enabling real-time editing and preview of experiences and management of offers on live and staging sites.
- Enabled dynamic script injection and retrieval from APIs to support live updates without manual deployment.
- Integrated with Adobe Target, AEM, Contentful, and GitHub to allow content sync and instant previews.
- Reduced template modification and validation time by 40% and improved editing responsiveness by 50%.
- Single-handedly owned development and client support, contributing to strong client satisfaction.

EDUCATION

Rajiv Gandhi Proudhyogiki Vishwavidyalaya, Bhopal, Madhya Pradesh, India
Bachelor of Engineering

ACHIEVEMENTS

- Top Performer at Inara Consultancy Services for delivering high-quality software solutions.
- Recognized for reducing frontend development time by 30% through optimized component reusability.
